

Réseau Obépine

The Obépine network [GIS Obépine\(https://www.reseau-obepine.fr/\)](https://www.reseau-obepine.fr/) (<https://www.reseau-obepine.fr/>) monitors wastewater from 200 wastewater treatment plants for the presence of coronavirus. The analyses allow the detection of traces of the viral genome to evaluate the variations of the concentration over time. The network provides operational monitoring to health and municipal authorities. The data are open and can be consulted here [Data\(https://www.reseau-obepine.fr/donnees-ouvertes/\)](https://www.reseau-obepine.fr/donnees-ouvertes/)
